Monitor II

Apple's addition of Monitor II to the Apple II family gives you the ability to display the screen in color and use applications programs with a resolution of 400 horizontal dots and 256 vertical dots.

Connects easily to your Apple computer via a standard video monitor cable and video switcher. Many video options include video output and monitor Apple peripheral cards: video output board, high resolution board, and color board.

To determine the video resolution the output of the Apple II can provide, check the video output of your video switcher. If you're using a video switcher, you're performing video processing to convert a color monitor to a monochrome monitor. In this case, you need to purchase a video switcher.
